

Ilminster Avenue E-ACT Academy – Progression in Teaching and Learning Addition

Level and Notes	Known Facts	Models & Images	Mental Calculations	Written Calculations
Foundation Stage Development Matters/ELGs	-Recognise some numerals of personal significance -Use a range of strategies for +, incl some recall of number stories	Select two groups of objects to make a given total of objects	-Find the total number of objects in two groups by counting them all -In practical activities & discussion, begin to use the vocab of addition	-Find one more than a number to 10 -In practical activities & discussion, begin to use the vocabulary involved in addition
Level 1 See Suffolk ENL - Essential to develop cardinal and ordinal representations of number in parallel - Understand + as finding the total of two or more sets of objects - Introduce 'How many more?'	Instant recall •Doubles of numbers to 5 eg $3 + 3 = 4 + 4$ •Story of 10 eg $7 + 3$ and $3 + 7$ Instant calculation • $10 + U$ •Stories within 5 eg $3 + 1$ (Using combining rather than counting in 1s)	Cardinal  The 'eightness' of 8  Counting in 1s on a number line	Add numbers of objects to 10 - Begin to add by counting on from the number of objects in the first set	Record their work, e.g. - record their work with objects, pictures or diagrams -begin to use the symbols '+' and '=' to record LI additions -e.g. $10 + 5 = 15$; $3 + ? = 7$; $10 = 8 + 2$ - Uses numbers up to 20
Level 2 - Check that children are not getting stuck in a counting in 1s strategy. A good sense check is that they don't add 10 (e.g. $25 + 10$) by counting on on their fingers but instead think '2 tens and 5 units plus 1 ten = 3 tens and 5 units'	Instant recall •Doubles of numbers to 10 and corresponding halves eg double 8, halve 16 •Story of 20 eg $17 + 3 = 3 + 17$ •Multiples of 10 which total 100 eg $80 + 20$ •Plus Level 1 Instant calculation Instant calculation •Stories within 10 eg $7 + 2$ •Add 10 to any number to 90 (Model with Numicon) eg $38 + 10 = 48$	Partitioning (Numicon/Dienes)  $36 + 45 = 81$ Bridging - Teach with 8 sandwich then represent on number line	Begin to add multiples of 10 to a 2 digit number, e.g. calculate $26 + 30$ (By counting on in 10s or partitioning) Record their work in writing, e.g. - record their mental calculations as number sentences	Partitioning Add two digit numbers using a written method, e.g. - use written methods that involve bridging 10
Level 3 - Don't forget to show you can add more than 2 numbers in column addition - Look at adding strings of single digit numbers, e.g. $6 + 3 + 4 + 9 =$ by finding number bonds to 10 first 	Instant recall •Double 15, 25, 35, 45 and corresponding halves 30, 50, 70, 90 •Plus Level 2 Instant calculation Instant calculation •Stories within 20 eg $16 + 3 = 19$ (Derived using compensating, bridging or near doubles) •Addition facts for multiples of 10, e.g. $70 + 90 = 160$ •Multiples of 5 which total 100 eg $15 + 85$	$8 + 5 = 13$  Compensating – Higher L3 $16 + 9 = 25$ 	Stories of 100 eg $36 + 64$ ----- Add 2 digit numbers mentally, e.g. -Calculate $36 + 19$ (Partitioning, compensating, bridging or near doubles) (Counting on strategy) ----- Apply knowledge of story of 100 to add 3 digit numbers eg $264 + 436$	Column addition Add three digit numbers involving bridging 10 or 100 Expanded progressing to Compact  -Add $£3.32$ to the context of money where bridging is not required
Level 4 -When working with money, teach that e.g. $£2.99 + £5.99$ can quickly be added mentally using compensating ($£3 + £6 - 2p$) -Chn should 'see' decimals so that they are not saying $0.5 + 0.6 = 0.11$	Instant recall •Plus Level 3 Instant calculation Instant calculation •Number stories of 100 •Doubles of tenths to 0.9 and corresponding halves eg double $0.2 = 0.4$ half of 0.4 is 0.2 •Addition facts for tenths up to 0.9, e.g. $0.7 + 0.9 = 1.6$	Column addition Model using dienes to show the carrying into the next column Addition facts for decimals Introduce using dienes: $0.6 + 0.5 = 1.1$	Calculation stories of 1000 for multiples of 10, e.g. $340 + \underline{\quad} = 1000$ ----- Calculate stories of 10 using 1dp, e.g. $3.6 + \underline{\quad} = 10$ Calculate stories of 1 using 2dp. $0.43 + \underline{\quad} = 1$	Column addition Use efficient written methods of addition, e.g. - calculate $1202 + 45 + 367$ - add decimals to 2 places
Level 5	Instant recall •Plus Level 4 Instant calculation Instant calculation •Doubles of hundredths to 0.09 and corresponding halves •Addition facts for hundredths up to 0.09, e.g. $0.07 + 0.09 = 0.16$		Calculate decimal stories of 10 or 100 e.g. $2.33 + \underline{\quad} = 10$ $32.64 + \underline{\quad} = 100$	

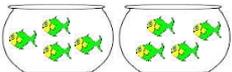

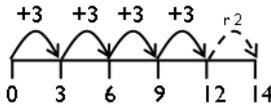

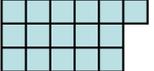

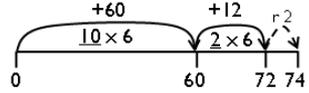

Iminster Avenue E-ACT Academy – Progression in Teaching and Learning Subtraction

Level and Notes	Known Facts	Models & Images	Mental Calculations	Written Calculations
Foundation Stage Development Matters/ELGs	--Use a range of strategies for - incl some recall of number bonds	Select two groups of objects to make a given total of objects	-In practical activities & discussion, begin to use the vocabulary involved in subtraction	Finds one less than a number to 10
Level 1 - See Suffolk ENL - Understand subtraction as 'taking away' objects from a set and finding how many are left	<u>Instant recall</u> <ul style="list-style-type: none"> Halves of even numbers to 10 (link to undoing of doubles) Know 'one less' than numbers to 20, e.g. 12 - 1 	 Subtraction as taking away objects from a set  Counting back in 1s on a number line	- Subtract numbers of objects to 10 - Begin to subtract by counting back from the number of objects in the first set	Record their work, e.g. - record their work with objects, pictures or diagrams - begin to use the symbols '-' and '=' to record calcs with numbers to 20
Level 2 - 'How many more' should be introduced in + and not related to subtraction until L3 (despite what L2 LOs and APP say) e.g. $8 + \underline{\quad} = 11$ - Count in 10s and 1s first then, quickly move to more efficient jumps (see bridging pic) Make links with addition $10 = 6 + 4$ so $10 - 4 = 6$ and $10 - 6 = 4$	<u>Instant recall</u> <ul style="list-style-type: none"> Halves of even numbers to 20 (link to undoing of doubles) Subtraction stories of 10 (e.g. $10 - 4 = 6$) <u>Instant Calculation</u> <ul style="list-style-type: none"> Subtraction stories within 10 (e.g. $9 - 2 = 7$) Subtract 10 from any number to 100 (Model with Numicon) 	Subtraction facts w/ Numicon  $9 = 6 + 3$ $9 - 3 = 6$ Subtracting 10 with Numicon $25 - 10 = 15$ 	At top L2, start to see subtraction as counting on to derive subtraction facts to 20 ONLY WHEN numbers are very close, e.g. $19 - 17 = 2$ Record their work in writing, e.g. - record their mental calculations as number sentences	Counting back on number line Subtract two digit numbers using a written method, e.g. $36 - 13$, (including bridging 10, e.g. $42 - 15$) 
Level 3 -Build understanding of subtraction as 'finding the difference/counting on'. Reinforce constantly. - 'Never partition for take away'  Need to teach this explicitly as otherwise chn will partition - Higher L3 - lots of practice on choosing when to use counting on (small difference/numbers close together) vs counting back (large diff/ taking away a small amount)	<u>Instant recall</u> <ul style="list-style-type: none"> Half of 90, 70, 50 and 30 Subtraction stories of 20 (e.g. $20 - 3 = 17$) <ul style="list-style-type: none"> Plus Level 2 Instant calculation <u>Instant Calculation</u> <ul style="list-style-type: none"> All subtraction facts from numbers to 20 (derived using bridging, compensating or near doubles) Subtraction facts for multiples of 10, e.g. $160 - 70 = 90$ 	Until chn can do this seamlessly, don't start on number line Bridging  Compensating Higher L3 	Subtract 2 digit numbers mentally, e.g. -Calculate $63 - 26$ (Counting back or counting on incl using compensating or bridging where relevant) -Subtraction Stories of 100, e.g. $100 - 64$ (Counting on strategy)	Subtract three-digit numbers including bridging 10 or 100 Counting back on a number line (see L2) OR Counting on on a number line for numbers close together e.g. $94 - 78$  T 10 
Level 4 -When working with money, teach that when finding change from a round number (e.g. £5, £10, £20) it is easier to count on on a number line than use column subtraction. -Keep chn visualising the starting number to help them to remember to exchange when necessary	<u>Instant recall</u> <ul style="list-style-type: none"> Half of 9, 7, 5 and 3 <ul style="list-style-type: none"> Plus Level 3 Instant calculation <u>Instant Calculation</u> <ul style="list-style-type: none"> Halves of decimals to 1 dp for even tenths, e.g. half of 5.8 	Column subtraction Model exchanging using dienes, as shown fully on separate sheet. 	Continue to use counting on/ counting back for all calculations that can and should be done mentally e.g. $£10.00 - £4.55 =$ $2003 - 1999 =$	Column subtraction Use efficient written methods of subtraction, e.g. - Calculate $1025 - 336$ - Subtract decimals to 2 places 
Level 5 - Reinforcing alignment of dps for column subtraction. Show how chn can write in 0 for e.g. empty hundredths as place holder.	<u>Instant recall</u> <ul style="list-style-type: none"> Plus Level 4 Instant calculation <u>Instant Calculation</u> <ul style="list-style-type: none"> Halves of decimals to 1 dp for odd tenths, e.g. half of 5.7 		Continue to use counting on/ counting back for all calculations that can and should be done mentally	

Iminster Avenue E-ACT Academy – Progression in Teaching and Learning Multiplication

Level and Notes	Known Facts	Models & Images	Mental Calculations	Written Calculations
Foundation Stage Development Matters/ELGs		Repeated groups of the same size	Count repeated groups of the same size Respond to/make up number stories	Informal jottings, mathematical mark making, problem solving process, use of blank paper
Level 1 Practise counting in 2s, 5s and 10s, including using visual images for support 	<u>Instant recall</u> <ul style="list-style-type: none"> Doubles of numbers to 5 	Numicon Practise showing the difference between an addition sentence and a mult sentence  $2+3 = 5$ $2 \times 3 = 6$ - Start to use arrays (See L2)		
Level 2 Practise counting in 3s Use repeated addition to solve multiplication problems	<u>Instant recall</u> <ul style="list-style-type: none"> Doubles of numbers to 10 Begin to know times table facts for 3, 5 and 10tt 	Arrays  $4 \times 3 = 12$ Counting stick times tables Watch Jill Mansergh videos in shared area 	- Use counting up in 3s, 5s and 10s (using fingers to keep track of groups) to start to derive multiplication facts, phrased as 'what is 4 times 3' or 'how many in four groups of 3'	Repeated addition on a number line e.g. $4 \times 3 = 12$ 
Level 3 -Chn need to get VERY confident with all tts: 2, 3, 4, 5, 10 should be instant recall; Can use double of 3 and 4 tt for 6 and 8 tt; Can use finger method initially for 9tt; 7tt can then be derived from others -However, all should then be reinforced through consistent use of Jill Mansergh technique	<u>Instant recall</u> <ul style="list-style-type: none"> Double 15, 25, 35, 45 Mental recall of 2, 3, 4, 5 and 10 Begin to know times table facts for 6, 7, 8 and 9tt <u>Instant calculation</u> <ul style="list-style-type: none"> Times table facts for 6, 7, 8 and 9tt (see notes) Times tables & place value calculations such as 70×3 	'Rows of chairs in hall' (array) as visual representation of grid method 	-Multiply a number by doubling and doubling again -Multiply a 2 digit whole number by 10	Grid method Multiply a 2 digit number by 2, 3, 4 5 & 6 $14 \times 6 = 84$ 
Level 4 - Recognise and describe number relationships, incl multiple, factors and squares	<u>Instant recall</u> <ul style="list-style-type: none"> Recall multiplication facts up to 10×10 Quickly derive corresponding division facts Plus Level 3 Instant calculation <u>Instant calculation</u> <ul style="list-style-type: none"> Times tables & PV calculations with decimals such as 0.7×3 	Use Dienes to introduce short multiplication See separate sheet for fully worked through example Grid method Extend grid method to use with a single digit x decimal	-Use place value to multiply a whole number by 10 or 100 -Multiply two multiples of 10 together, e.g. 40×30 Partitioning Multiply teens numbers by single digit by visualised partitioning $14 \times 6 = 84$ 	Short multiplication for single digit multiplication 239×4 - Use efficient methods  of short multiplication - Multiply a simple decimal ³ by a single digit, e.g. 36.2×8 Grid method Extend grid method to use with a single digit x decimal as well
Level 5	<u>Instant recall</u> <ul style="list-style-type: none"> Times tables & place value calculations such as 40×3 Plus Level 4 Instant calculation <u>Instant calculation</u> <ul style="list-style-type: none"> Times tables & PV calculations with decimals such as 0.7×0.3 		-Multiply decimals and whole number by 10, 100 and 1000 -Multiply a two digit number by a single digit	Short multiplication or grid Multiply decimal numbers by a single digit, e.g. 31.62×8 Multiply any 3 digit number by any 2 digit number

Ilminster Avenue E-ACT Academy – Progression in Teaching and Learning Division

Level and Notes	Known Facts	Models & Images	Mental Calculations	Written Calculations
<p>A note about grouping and sharing in division: When asked to show a picture or tell a story for a division sentence, e.g. $8 \div 4$, most people give a sharing example (sweets model rather than fish model in image below). However, mathematically grouping can be more useful for various reasons: 1) It is the inverse of the multiplication structure, 2) chunking on a number line uses grouping 3) it is much easier to divide a number INTO halves than between halves. Children need to use both structures, so $8 \div 4$ should be routinely read as “8 divided/shared between 4 OR 8 divided into groups of 4” and children should practice saying and modelling both. The abstract “8 divided by 4” can be used once children have a solid understanding of grouping and sharing.</p>				
<p>Foundation Stage Development Matters/ELGs</p>			Share objects into equal groups and count how many in each group	Informal jottings, mathematical mark making,, prob solving, blank paper
<p>Level 1 Practise grouping and sharing in realistic class contexts. Practise counting in 2s, 5s and 10s</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Halves of even numbers to 10 	<p>Sharing 8 sweets shared between 4 chn</p> 		
<p>Level 2 Practise counting in 3s Begin to use repeated addition to solve div problems Lots of practice reading $8 \div 4$ as “8 divided/shared between 4 OR 8 divided into groups of 4”</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Halves of even numbers to 20, incl recognising e.g. $14 \div 2$ as finding a half 	<p>Grouping 4 fish can live in 1 bowl. How many bowls do 8 fish need?</p> 	<p>- Use counting up in 3s, 5s and 10s (using fingers to keep track of groups) to start to derive division facts phrased as ‘how many groups of 3 in 12?’</p>	<p>Repeated addition on a number line</p> <p style="text-align: right;">$14 \div 3 = 4 \text{ r } 2$</p> 
<p>Level 3 -Start to use vocab of factors Children should be comfortable with concept of factors by L4 - Get children to visualise where 28 lies on e.g. a 5 tt counting stick, then identify how many groups of 5 can be made, plus remainder. N.B. Chn will need to be very familiar with Jill Mansergh method (see multiplicat’n)</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Half of 30, 50, 70, 90 Begin to know division facts for 3, 4, 5 and 10 times table 	<p>Arrays with remainders</p>  <p style="text-align: right;">$16 \div 3 = 5 \text{ r } 1$</p> <p>Counting stick $28 \div 5 = 5 \text{ r } 3$</p>  <p>5 groups of 5 ...and 3 mode</p>	<p>-Use half and half again for $\div 4$ -Divide whole numbers by 10 (whole number answers) -Calculate div facts with remainders for 2, 3, 4, 5 and 10 tt</p> <p>Jottings to support mental chunking e.g. $2000 \div 250$ $2 \times 250 = 500$ $4 \times 250 = 1000$ $8 \times 250 = 2000$</p>	<p>Chunking on a number line Divide a 2 digit number by 2, 3, 4 and 5 with whole number answers and remainders e.g. $49 \div 3$</p> <p style="text-align: right;">$74 \div 6 = 12 \text{ r } 2$</p> 
<p>Level 4 -Working out division facts with remainders is often neglected. Chn need lots of practice. Can count up on fingers at first but should move to using tt facts asap. <u>Essential prerequisite</u> to bus stop.</p>	<p><u>Instant recall</u></p> <ul style="list-style-type: none"> Half of 1, 3, 5, 7, 9 <p><u>Instant calculation</u></p> <ul style="list-style-type: none"> Quickly derive division facts for tts up to 10×10, Division facts with remainders for all tt Division facts & place value calculations such as $180 \div 3$ 	<p>Use Dienes to introduce bus stop method</p> <p>See separate sheet for fully worked through example</p>	<p>- Div whole numbers by 10 or 100 -Mental chunking for ‘simple’ calcs, e.g. Yoghurts cost 45p each; how many can I buy for £5?</p> <p style="text-align: center;">$\begin{array}{l} \text{£}5.00 = 11 \text{ yoghurts} \\ \text{£}4.50 = 10 \text{ yoghurts} \quad 50\text{p left so I can buy} \\ \text{yoghurts} \quad \quad \quad 1 \text{ more yoghurt} \end{array}$</p>	<p>Bus stop method for single digit division Divide a 2 or 3 digit number by a single digit</p> <p style="text-align: center;">$\begin{array}{r} 159 \text{ r } 1 \\ 4 \overline{) 6237} \end{array}$</p>
<p>Level 5 - Children should be comfortable with concept of square roots</p>	<p><u>Instant recall</u></p> <p>Plus Level 4 instant calculation</p> <p><u>Instant calculation</u></p> <ul style="list-style-type: none"> Division facts & place value calculations such as $1.8 \div 3$ 		<p>-Multiply and divide decimals and whole numbers by 10, 100 and 1000 -Multiply a two digit number by a single digit</p>	<p>Bus stop method</p> <ul style="list-style-type: none"> Divide decimal numbers by a single digit, e.g. $31.62 \div 8$ Divide any 3 digit number by any 2 digit number
